EDUCATION

Indian Institute of Information Technology and Management, Gwalior

B.Tech in Electrical and Electronics Engineering — CGPA: 8.36

Gwalior, MP

Aug. 2024 – Aug. 2028

Vadanta International School

Class XII (CBSE) — 95.8%

Jaipur, Rajasthan

Apr. 2023 – Apr. 2024

EXPERIENCE

Software Engineering Intern, HireFT | Remote

March 2026 – May 2026

- Built a concurrent job-scraping pipeline in **Go** that processed thousands of Workday ATS postings using worker pools, **PostgreSQL** deduplication, **S3** storage, and **SQS**-driven enrichment queues.
- Designed and shipped a resume-generation pipeline using **Groq** with a two-call flow — extracting job requirements first, then scoring and tailoring resumes for ATS compatibility.
- Improved job-to-role matching accuracy across **500K+ records** by adding staged role resolution with **Caffeine** caching, eliminating redundant database lookups.
- Built **REST APIs** for profile management, presigned **S3** uploads, and auto-apply preferences; added PDF hyperlink extraction via **PDFBox** with annotation and coordinate-based parsing.

PROJECTS

Visync | *Spring Boot, SockJS, Next.js, Konva.js, PostgreSQL, Redis*

April 2026 – May 2026

- Built a real-time collaborative whiteboard with **sub-1ms WebSocket routing** via **ConcurrentHashMap** dispatch and bounded **ThreadPoolExecutor** backpressure for database stability.
- Reduced network payload by **90%** using client-side **Ramer–Douglas–Peucker** path simplification to strip redundant stroke points before persistence, with no visible quality loss.
- Engineered a hybrid snapshot-compaction system that merges **DrawingEvent** rows into a single JSONB **BoardSnapshot** via scheduled 10-second flushes, cutting stored rows by approximately **95%** and loading boards in under **150ms**.
- Implemented an infinite virtual coordinate system in absolute world pixels using viewport inverse projection for resolution independence, alongside atomic WebSocket session cleanup, exponential-backoff reconnection, and synchronized undo/redo.

Job Match Analyzer | *React.js, Node.js, Express, MongoDB, Groq (Llama 3.3 70B), Puppeteer*

March 2026

- Built a **weighted scoring engine** that matches resumes to job postings across skills (40%), experience (30%), education (15%), and responsibilities (15%) using fuzzy matching and a 500+ synonym dictionary.
- Wrote a **Puppeteer-based scraper** with platform-specific parsers for Greenhouse, Lever, and Ashby to reliably extract job data from JavaScript-rendered career pages.
- Integrated **Groq Llama 3.3 70B** to generate targeted resume suggestions based on detected skill gaps; validated scoring logic with property-based tests using fast-check.
- Organized the backend into independent services (scraper, matcher, LLM, PDF parser) with fault isolation and fallback handling, persisting analysis history in **MongoDB**.

SentinelAPI | *Node.js, Express, MongoDB, Socket.io, JWT*

Jan. 2026 – Feb. 2026

- Built a vulnerability scanner covering **12 attack categories** — SQL/NoSQL injection, XSS, command injection, CORS, SSL/TLS, and auth flow testing — with payload injection and severity classification.
- Wrote a **security middleware chain** with 40+ regex threat patterns, recursive NoSQL operator sanitization (**\$where**, **\$eval** blocking), and automatic injection of CSP, HSTS, and X-Frame-Options headers.
- Added **real-time traffic monitoring** with Socket.io, supporting **1,000+ concurrent connections** at sub-50ms latency, streaming per-request events and threat metrics to a live dashboard.
- Designed a **multi-tier rate limiter** (5 req/15min for auth, 100 req/min for API) with hot-reloadable MongoDB config; generated OWASP-referenced reports with weighted risk scoring and CWE mappings.

TECHNICAL SKILLS

Languages: Go, Java, Python, JavaScript, TypeScript, C, C++, Kotlin, SQL

Frameworks & Libraries: Spring Boot, React.js, Next.js, Node.js, Express.js, Socket.io, Konva.js, Puppeteer, PDFBox

Cloud & Databases: PostgreSQL, MongoDB, Redis, AWS S3, AWS SQS

Tools & Platforms: Git, GitHub, Linux, Postman

Core Concepts: REST API Design, Authentication (JWT), Database Modeling, WebSockets, Concurrent Processing, LLM/AI Integration, Security Testing, OOP & DSA

LEADERSHIP & ACTIVITIES

Secretary, SAC (Technical) | ABV-IIITM Gwalior

May 2026 – Present

- Directing institute-level technical events and managing a cross-functional team of 20+ members.

Operations Lead, IEEE | ABV-IIITM Gwalior

Jan. 2025 – Oct. 2025

- Spearheaded end-to-end operations for a national hackathon with 2,000+ registrations and 500+ finalists.
